

Hey guys!

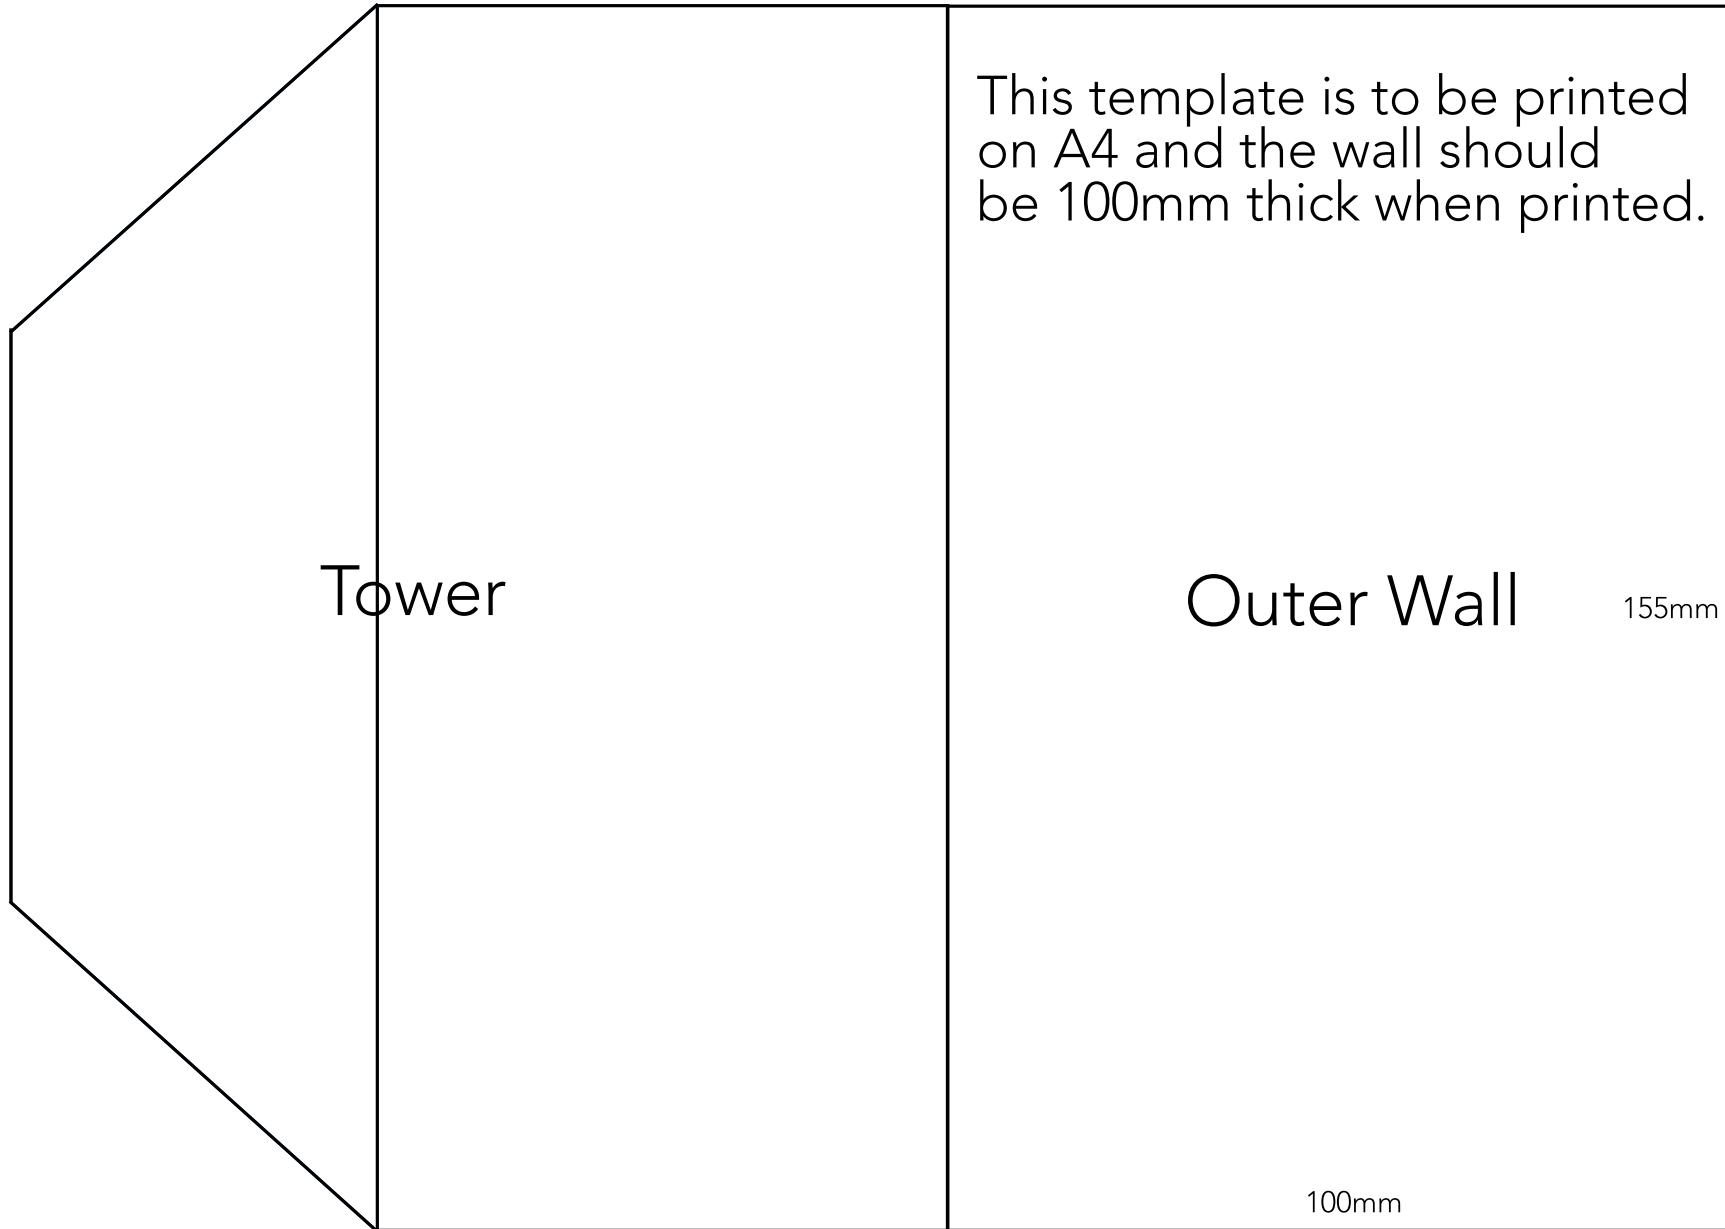

I've updated this template to have two versions. The first an original one is slightly over-scaled to help compensate for older printers which have a crop factor based on the margins.

The second is true scale as designed in photoshop. Each template lists a measurement and a corresponding component that you can hpsycal check with your ruler ro see how your printer is cropping the PDF.

Test out both with your printer and see which prints correctly. If neither come out as correct, you may have to tweak the scaling settings by a few %.

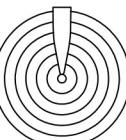

Cheers guys!
