

Hey guys!

The main section of the battlement in this template should be 200mm long.

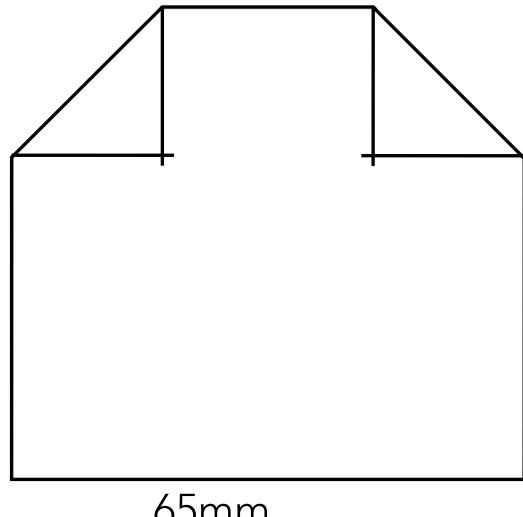

I've updated this template to have two versions. The first an original one is slightly over-scaled to help compensate for older printers which have a crop factor based on the margins.

The second is true scale 200mm. This means if your printer crops in, the battlement will press less than 200mm.

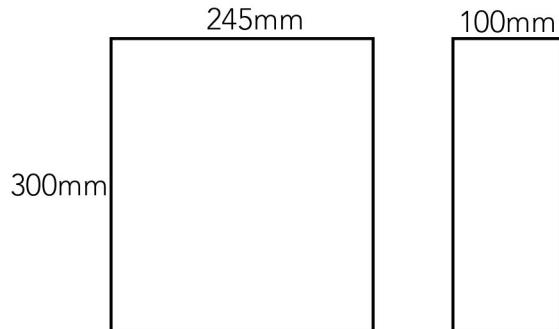

Test out both with your printer and see which prints correctly. If neither come out as 200mm long you may have to tweak the scaling settings by a few %.

Cheers guys!

Crenellated Battlement

Main Wall Dimensions

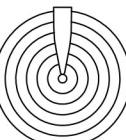

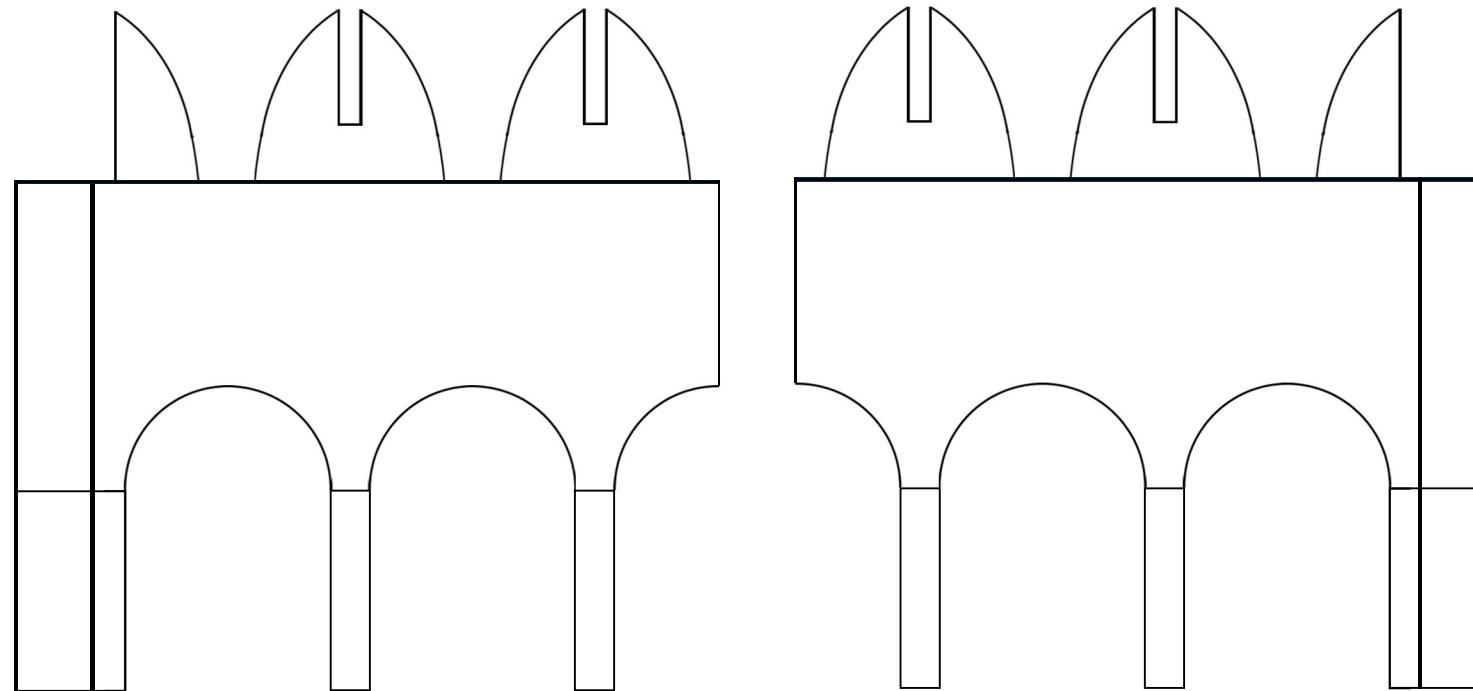

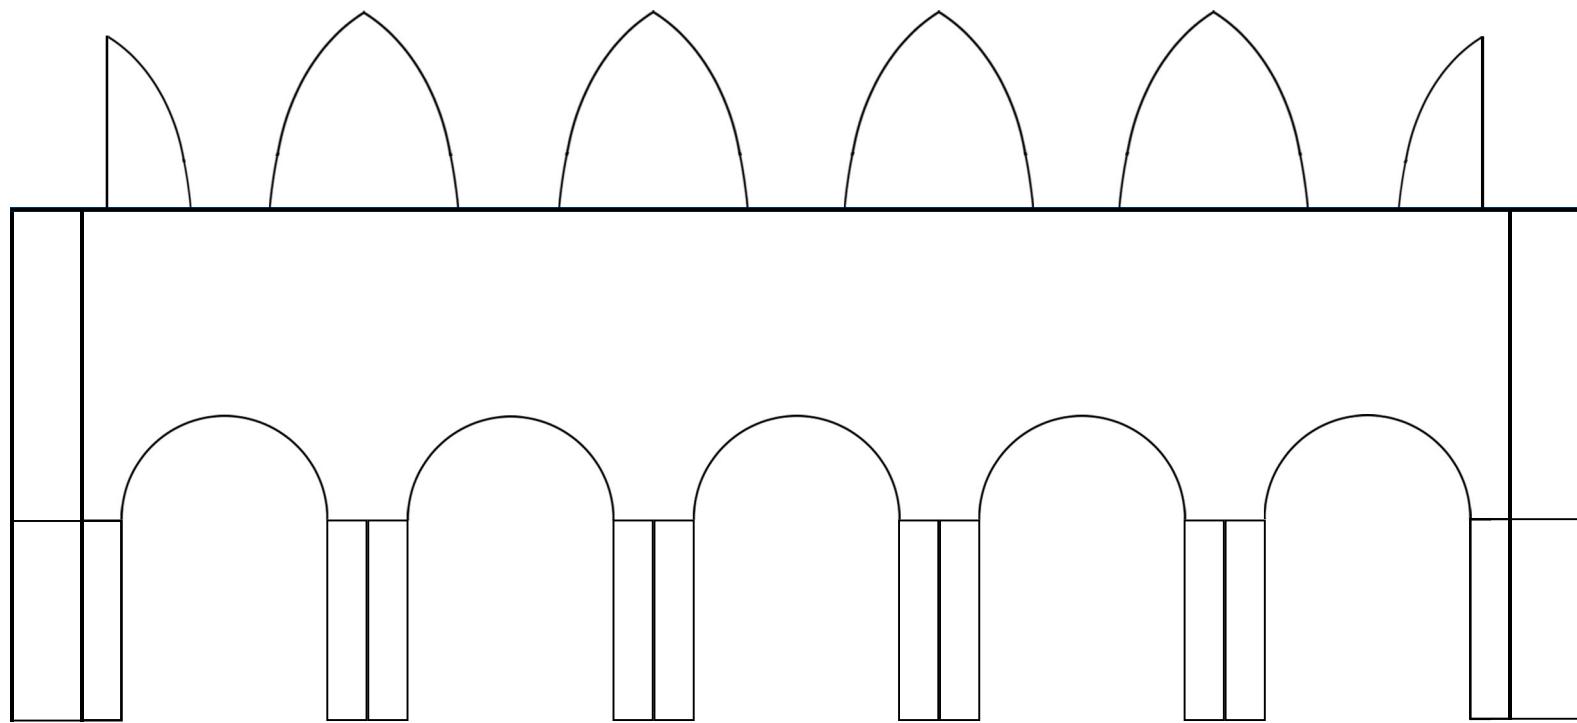

This template is designed for A4 standard paper and when printed the main battlement should be 200mm long and the pillar cross-section should be 65mm wide.
